

E-LEARNING - MICROSOFT DELVE 365

PRODUCT INFORMATION

In Microsoft Delve, you can manage your Office 365 profile. You also receive an overview of your own content, content shared with you and public content stored in Office 365. Delve uses the self-learning algorithm Office Graph. This algorithm continuously analyses which people work together, which documents they edit and which content items are particularly popular. This results in a network in which you can quickly find people and content relevant to you.
